Small-Business Cybersecurity Guide

A practical security checklist for Rio Grande Valley businesses.

Check the boxes that are already true. The unchecked ones are your biggest, cheapest security wins. You do not need an enterprise budget — you need the basics done consistently.

Accounts & access

- ☐ Multi-factor authentication (MFA) is on for email and every critical app
- ☐ Staff use unique passwords via a password manager, not sticky notes
- ☐ Admin accounts are separate from everyday accounts
- ☐ We remove access the same day someone leaves

Email & phishing

- ☐ Staff know how to spot and report a phishing email
- ☐ We verify money or gift-card requests by phone, never by email alone
- ☐ Our domain has basic email protections (SPF, DKIM, DMARC)

Devices

- ☐ Every computer and phone locks with a PIN or password and auto-locks
- ☐ Devices install security updates automatically
- ☐ Business devices run reputable endpoint protection

Data & backups

- ☐ We back up critical data automatically
- ☐ We have actually restored from a backup to confirm it works
- ☐ Sensitive files are shared with links and permissions, not forwarded copies

If something goes wrong

- ☐ We know who to call and what to do first if we suspect a breach
- ☐ We have cyber-insurance or have priced it out
- ☐ Someone owns security and reviews it a few times a year

Not sure where you stand? Book a free, no-pitch security assessment at bis-rgv.com and we will show you the one fix that closes your biggest gap first.
